

Zeeshan Ali

meetzealishan@gmail.com | 470-807-6265 | www.linkedin.com/in/zeeshan-ali-929101261 | Atlanta, GA

EDUCATION

University of Georgia, College of Engineering – Athens, GA

May 2028

Bachelor of Science in Computer Engineering

GPA: 3.8

Relevant Coursework: Object Oriented Programming, Software Development, Computing and Programming, Data Science

PROFESSIONAL EXPERIENCE

Make It Loud Web – IT & Automation Intern – Buford, GA

June 2025 – August 2025

- Built and launched an automated SEO analytics product to scale reporting workflows, supporting data-driven growth decisions across 200+ client accounts.
- Engineered real-time execution APIs and a responsive web UI with live logs, progress bars, timers, and pause/resume controls, reducing manual monitoring and intervention by approximately 70% during long-running automation workflows.
- Integrated AI-assisted ranking classification for keywords research and validation to improve page-1/page-2 accuracy.
- Provided IT systems support for 200+ small-business clients across Microsoft 365 applications, WordPress, internal automation tools, resolving email configuration, access control, website issues, and core infrastructure needs efficiently.

Ajanta Electrical Industries – AI Development Intern – India

June 2025

- Presented an AI-powered Smart Panel prototype using 4–5 IoT sensors and thermal cameras, with a custom programmed UI.
- Designed an end-to-end IT systems architecture for an AI-powered sensor prototype, integrating IoT devices, cloud-based data ingestion and storage, and an AI/ML engine for real-time analytics, predictive maintenance, and dashboard insights.
- Understood assembly flow processes of the manufacturing industrial-grade electrical panel equipment including planning requirements, frame fabrication, coating/painting, electrical integration by reading electrical blueprints, and testing.

VDart Inc. – AI Analyst Intern – Alpharetta, GA

August 2024 – May 2025

- Led an AI intern team to build an enterprise AI chatbot for 4,000+ employees, enabling natural-language queries over company data (customers, use cases, code repos) and improving internal knowledge discovery and self-serve support.
- Completed AWS Cloud certification covering core IT resources and cloud storage types (object, block, file), applying cloud fundamentals to real-world workflows for data, deployment, and reliability in production environments.
- Managed IT Resources for clients valued at over \$1,000,000, maintaining websites and deployments, supporting SEO platforms, and troubleshooting production issues to improve uptime, performance, and delivery speed across teams.

PROJECT EXPERIENCE

AI Electronic Waste Sorter IEEE First-Year Council Project – Athens, GA

September 2025 – Present

- Building an AI-powered embedded computer-vision system on Raspberry Pi 5 using Python, PyTorch, and YOLOv8, detecting and classifying 5 e-waste components from live camera feeds with real-time inference accuracy above 90 percent.
- Integrating OpenCV for live camera feed processing, enabling real-time detection of electronic components.
- Created a concise system architecture mapping how the trained AI model interfaces with Pi camera + motor/servo controllers (GPIO/PWM), enabling closed-loop automation of a 3D sorting mechanism.

Visual Detection Autonomous Goalie Showcase Project – Milton, GA

January 2023 – May 2023

- Developed a C++ autonomous control pipeline using Limelight vision to detect incoming soccer balls, calculate horizontal offset and distance, and generate steering commands that dynamically adjusted motor output for accurate goalie positioning.
- Converted the robot from manual joystick control to fully autonomous mode, designing the end-to-end software architecture linking camera perception, vision math, control logic, gyro feedback, and drivetrain actuation for closed-loop motion.
- Demonstrated the fully autonomous goalie robot to 300+ students and industry sponsors at Innovation Academy's engineering showcase, explaining the C++ vision pipeline, control algorithms, and real-time decision-making system.

CAMPUS INVOLVEMENT & ASSOCIATIONS

MicroMouse Competition Institute of Electrical and Electronics Engineers (IEEE) – Athens, GA

August 2025 – Present

- Designing schematics and a PCB in Altium for a fully autonomous mouse with a 3x6 in. frame to traverse a 10x10 ft. maze

TECHNICAL PROFICIENCIES

Hardware: Altium, Autodesk Fusion, Circuit Design, Multisim, Raspberry Pi, Arduino, SolidWorks, Fabrication, Power Tools

Software: Python, C++, Java, MATLAB, GitHub, Unix Environments, Eclipse IDE, VS Code, Object-Oriented Programming
